Ready to Go ELITE? Upgrade your X-Terra Voyager

2026-03-04 - Patrick - [Product Update](#)

READY TO GO ELITE? HERE'S HOW TO UPGRADE YOUR X-TERRA VOYAGER

Metal detecting has grown into a pastime that gives people space to relax, learn, and explore the stories hidden beneath the surface. Many people begin with a detector that feels simple and steady. Others look for more depth, more control, and more ways to fine tune their search. The X-TERRA VOYAGER and the X-TERRA ELITE sit perfectly within that progression, offering a clear path for newcomers who want to build their skills and eventually move into more advanced detecting.

STARTING OUT WITH X-TERRA VOYAGER

X-TERRA VOYAGER is designed for people who are new to the hobby. It keeps things straightforward so the focus stays on learning how to read signals, understand the land, and enjoy the experience. Its settings are easy to navigate and its performance is dependable, which helps beginners gain confidence with every trip.

Newcomers often discover that once they understand the basics, they start looking for more ways to explore specific targets and more ways to adapt to different ground conditions. This is usually the moment when an upgrade starts to feel natural.

MOVING UP TO X-TERRA ELITE

X-TERRA ELITE is built for detectorists who want more control and more power. It suits people with experience as well as those who have learned the fundamentals and now want to shape the detector to their own style. With Multi-IQ® processing, target information becomes clearer, depth performance increases and the entire detecting experience becomes more responsive.

What makes X-TERRA ELITE stand out is the way it supports the detectorist. It lets you adjust audio, select search modes that suit the ground, and tailor sensitivity so you can pick up targets you might miss with a simpler detector. It feels like a natural next step for anyone who began with X-TERRA VOYAGER and now wants to develop their skills further.

REAL FINDS FROM REAL DETECTORISTS

People often wonder how much difference a detector can make once they begin upgrading. Two recent stories show how powerful the change can be when experience meets the right tool.

Olly Wilkins took X-TERRA ELITE into the field and recorded an impressive run of discoveries that highlighted the detector's accuracy. Among his finds were a Charles I silver hammered half groat dated between 1625 and 1649, a bronze Roman key with rich patina and a Roman sestertius of Antoninus Pius from 138 to 161 AD. That sestertius came through with a clear 78 signal and stood out as the highlight of the day. Olly shared that X-TERRA ELITE "didn't miss a beat all day", demonstrating how well it handles a range of targets in varied ground.

Another story comes from Jason Oram, who returned to detecting after a break of thirty years. He chose X-TERRA ELITE for his fresh start. On only his fourth outing he uncovered a gold aureus while exploring farmland in Hampshire. He spoke about the moment with simple honesty, saying he did a small dance before taking time to take in what he had found. The coin now sits with the local museum for assessment and recording. It is a reminder that even after many years away, the right detector can bring someone straight back into the heart of the hobby.

WHY AN UPGRADE FEELS NATURAL

For many detectorists, the step from X-TERRA VOYAGER to X-TERRA ELITE comes from experience. Once you begin to understand signals and patterns in the soil, you start to notice where added performance, extra depth, and flexible settings can help you explore more areas with more precision. X-TERRA ELITE gives you that control without making the process complicated.

It supports learning, growth and curiosity. It suits quiet walks across pasture or slow, patient work on more challenging ground. It also gives you room to grow, which means you can keep developing your technique without needing to switch detectors again too soon.

EXPLORING WITH PURPOSE

Metal detecting always comes back to the search. It is about the movement of the coil, the sound in your headphones, and the moment a signal tells you to slow down and investigate. Both detectors fit comfortably into that experience. X-TERRA VOYAGER helps you begin that journey and X-TERRA ELITE helps you expand it.

When you are ready to look deeper and explore with more precision, the transition feels smooth and rewarding. The stories from the field show what is possible and each trip becomes an opportunity for something new.

The X-TERRA ELITE is on sale from December 2nd to December 31st. Any X-TERRA ELITE purchased during this period includes a free [PRO-FIND 40](#) so you can step into the new year with a solid detecting setup.
